                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 88
US-07-940-242A-19/C

Sequence 19, Application US/07940242A

Patent No. 5427909

GENERAL INFORMATION:
APPLICANT: OKAMOTO, Hiroaki
ITILE OF INVENTION: OLIGONUCLEOTIDES AND DETERMINATION
ITILE OF INVENTION: SYSTEM OF HCV GENOTYPES

NUMBER OF SEQUENCES: 99

CORRESPONDENCE ADDRESS:
ADDRESSEE: Beveridge, DeGrandi, Weilacher & Young
STREET: 1850 M Street, N.W. (Suite 800)

CITY: Washington
APPLICANT: Lacroix, Jean-Michel
APPLICANT: Shipman, Robert
TITLE OF INVENTION: METHOD FOR BI-DIRECTIONAL SEQUENCING OF
TITLE OF INVENTION: NUCLEIC ACID POLYMERS
NUMBER OF SEQUENCES:
ADDRESSE: Oppedahl & Larson
STREET: 1992 Commerce Street Suite 309
GITY: Yorktown
STREET: NY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match 0.9%; Score 14.8; DB 1; Length 19; Best Local Similarity 88.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                           ASSULT 19.08-899-296A-20/C

Sequence 20, Application US/0889296A

Patent No. 5872242

GENERAL INFORMATION:

APPLICANT: Monia, B.P., Cowsert, L.M. and Mancharan, M.

TITLE OF INVENTION: Inhibition of ras
NUMBER OF SEQUENCES: 55

CORRESPONDENCE ADDRESS:

ADDRESSEE: Jane Massey Licata
STREET: 210 Lake Drive East, Suite 201

Patent No. 5889885
GENERAL INFORMATION: David H-F.
APPLICANT: Teng, David H-F.
APPLICANT: Tevery III, William L.
APPLICANT: Skolnick, Mark H.
TITLE OF INVENTION: SPECIFIC MUTATIONS OF MAP KINASE KINASE
TITLE OF INVENTION: 4 (MKK4) IN HUMAN TUMOR CELL LINES IDENTIFY IT AS A TUMOR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 20;

Patent No. 6312900
GENERAL INFORMATION:
APPLICANT: Nicholas M. Dean; Robert A. McKay; Loren J.
APPLICANT: Miraglia; Brenda F. Baker
TITLE OF INVENTION: Antisense Oligonucleotide
TITLE OF INVENTION: Compositions and Methods for the Modulation of
TITLE OF INVENTION: Activating Protein 1
NUMBER OF SEQUENCES: 139
CORRESPONDENCE ADDRESS:
ADDRESSES: Law Offices of Jane Massey Licata
STREET: 66 East Main Street
CITY: Marlton
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

APPLICANT: Zwick, Michael G.
APPLICANT: Edington, Brent E.
APPLICANT: McSwiggen, James A.
APPLICANT: McSwiggen, James A.
APPLICANT: Merlo, Particia Ann Owens
APPLICANT: Skokut, Thomas A.
APPLICANT: Skokut, Thomas A.
APPLICANT: Young, Scott A.
APPLICANT: Folkerts, Otto
APPLICANT: Merlo, Donald J.
IIILE OF INVENTION: OOMPOSITION AND METHODS FOR
IIILE OF INVENTION: MODULATION OF GENE EXPRESSION
IIILE OF INVENTION: IN PLANTS
APPLICANT: Pavco, Pamela
APPLICANT: McSwiggen, James
APPLICANT: Stinchcomb, Jaine
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: TREATMENT OF DISEASES OR
TITLE OF INVENTION: OF VASCULAR ENDOTHELIAL
TITLE OF INVENTION: ENDOTHERS:
ADDRESSEE: Lyon & Lyon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 44, Application US/09673809
Patent No. 6528261
GENERAL INFORMATION
TITLE OF INVENTION Method for typing of HLA alleles.
FILE REPERENCE: PCT99.66.HLA
CURRENT APPLICATION NUMBER: US/09/673,809
PRIOR PILING DATE: 2000-10-20
PRIOR PILING DATE: 1998-04-20
NUMBER OF SEQ ID NOS: 107
SOFTWARE: Patent IN Ver. 2.1
